time spent: 0.5 hr
target ship date:2022-11-04

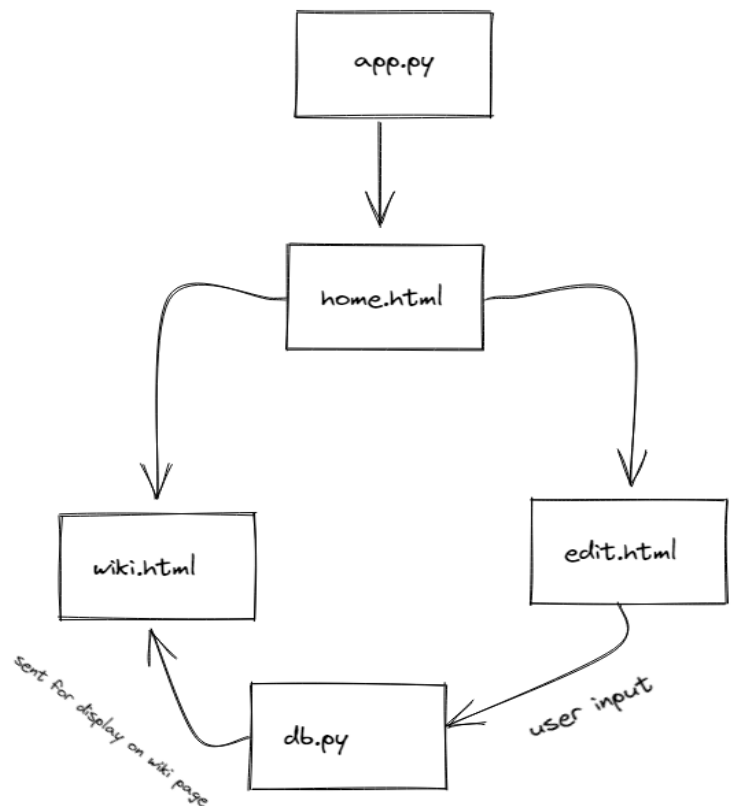

Project Components & Roles:
A list of program components with role of each specified. (e.g.,
a car engine is comprised of various components
- app.py – flask, define routes of pages
- templates
    - wiki.html – wiki information
    - home.html – home page
    - edit.html – edit wiki form page
- db.py - SQLite3, holds the information to be put on webpage
- content.db - table that holds information about each wiki
  page

How each component relates to the other:
app.py will host the
webpage locally. The
specified routes in
app.py will lead to
different pages on the
wiki. Each wiki page
follows one of the
templates. Users can
input form responses to
edit.html which sends
the information to the
database via running
db.py

Database Organization (content.db):
id | page title | content | time last edited

Site map for front end:
- /
    - home page – home.html
    - hyperlinks to edit page → /edit
    - hyperlinks to different wiki pages → /wiki/page_title
- /edit
    - Form submission – edit.html
    - Based on which page the user edited → /wiki/page_title
- /wiki/page_title
    - Wiki.html (template)
    - hyperlink to edit page → /edit
    - hyperlink to home page → /home

Breakdown of tasks & member assignment:
1. edit.html + db.py
    a. Lauren Lee
2. app.py
    a. Ian Jiang
3. home.html + placeholder info
    a. Vivian Teo
